STAY IN IGLOO

Igloos are traditional winter dwellings of the Inuit and other Arctic indigenous peoples, designed for survival in harsh cold environments. The term "igloo" is derived from the Inuit word "iglu," meaning "house" or "shelter." Igloos are typically constructed using compacted snow blocks, stacked in a circular pattern to form a dome-shaped structure. The unique design of igloos allows them to efficiently trap heat and provide insulation against extreme cold temperatures.

Inuit hunters and travelers historically built igloos as temporary shelters during winter expeditions, taking advantage of the abundant snow. The entrance of an igloo is often constructed lower than the interior floor, helping to retain heat and prevent cold air from entering. Igloo construction requires knowledge of snow conditions, as well as the ability to cut and shape snow blocks with precision.
